PICMG GENERAL DESCRIPTION

PICMG Backplane in this section are SBC (Single Board Computer)/SHB (Single Host Board) companion that feature expansion slots such as ISA, PCI, PCI-X or PCI Express interface. In addition, backplane also features several power connectors that drawn power from power supply to devices on it. Some LEDs are designed on-board to indicate status of each power rail.

PICMG 1.0 support both ISA & PCI, PICMG 1.2 support dual PCI or PCI-X, and PICMG 1.3 support PCI Express and PCI expansion. However, some bridges or switches can be applied to backplane to support more devices or different kind of expansion interfaces. However, PICMG 1.0, 1.2, and 1.3 are not compatible each other. Please watch out the category of backplane that you are choosing for the project.

FEATURES

- 2.4 mm PCB thickness
- ATX power connector support
- Fit for any 14-slot chassis
- 316.87(L) x 257.18(W) mm; 12.48"(L) x 10.13"(W)
